23. (New) A snowmobile comprising:
a body frame having a width dimension which is essentially perpendicular to a direction of travel;
a ski-runner attached to the body frame;
a crawler connected to the body frame;
an engine which drives the crawler, the engine having a crankcase which is substantially parallel to the width dimension of the body frame, the engine being tilted forward in the direction of travel;
a supercharger connected to compress intake air for the engine.

24. (New) The snowmobile of claim 23, further comprising an exhaust manifold for the engine, and wherein the exhaust manifold and the supercharger are situated on a front side of the engine relative to the direction of travel.

25. (New) The snowmobile of claim 23, further comprising:
a windshield formed on the body frame;
an intake manifold for the engine arranged close to the windshield.

26. (New) The snowmobile of claim 25, wherein the intake manifold is arranged vertically beneath the windshield.

27. (New) The snowmobile of claim 23, wherein the engine is a four-cycle engine.

28. (New) The snowmobile of claim 27, further comprising a drysump oil supplying system that supplies the engine with engine oil.

29. (New) The snowmobile of claim 28, wherein the body frame comprises a front cover and a track housing, wherein a front suspension supports the ski-runner and is attached to the body frame at a front suspension attachment point, and wherein the drysump oil supplying system comprises:

an oil tank disposed inside an engine compartment that is enclosed by the front cover;

an oil pan arranged between the front suspension attachment point and the track housing.

30. (New) The snowmobile of claim 23, wherein the body frame comprises a front cover, and further comprising:

an exhaust manifold extending frontward from the engine in an engine compartment that is enclosed by the front cover; and

wherein the supercharger is connected to the exhaust manifold.

31. (New) The snowmobile of claim 23, wherein the engine has an engine body and an intake path, and wherein the intake path comprises an intake manifold connected to an outlet side of the supercharger, and wherein the intake path is situated on an upper rear side of the engine body and the supercharge is situated in front of the engine body relative to the direction of travel.

32. (New) The snowmobile of claim 31, further comprising an air cleaner situated in front of the supercharger relative to the direction of travel.

33. (New) The snowmobile of claim 23, further comprising:
an air cleaner which introduces air into the supercharger;
an intercooler which receives and cools compressed air delivered by the supercharger;
an intake path for supplying air to cylinders of the engine.

34. (New) The snowmobile of claim 23, further comprising a windshield formed on the body frame, and wherein the intake path is arranged vertically beneath the windshield.

35. (New) The snowmobile of claim 23, wherein the engine has a crankcase which is substantially parallel to the width dimension of the body frame.

36. (New) A snowmobile comprising:
a body frame;
a ski-runner attached to the body frame;
a crawler connected to the body frame;
a four-cycle engine which drives the crawler;
a supercharger connected to compress intake air for the engine; and
a drysump oil supplying system that supplies the engine with engine oil.

37. (New) The snowmobile of claim 36, further comprising an exhaust manifold for the engine, and wherein the exhaust manifold and the supercharger are situated on a front side of the engine relative to a direction of travel.

38. (New) The snowmobile of claim 36, further comprising:
a windshield formed on the body frame;
an intake manifold for the engine arranged close to the windshield.

39. (New) The snowmobile of claim 38, wherein the intake manifold is arranged vertically beneath the windshield.

40. (New) The snowmobile of claim 36, wherein the body frame comprises a front cover and a track housing, wherein a front suspension supports the ski-runner and is attached to the body frame at a front suspension attachment point, and wherein the drysump oil supplying system comprises:

an oil tank disposed inside an engine compartment that is enclosed by the front cover;

an oil pan arranged between the front suspension attachment point and the track housing.

41. (New) The snowmobile of claim 36, wherein the body frame comprises a front cover, and further comprising:

an exhaust manifold extending frontward from the engine in an engine

compartment that is enclosed by the front cover; and
wherein the supercharger is connected to the exhaust manifold.

42. (New) The snowmobile of claim 36, wherein the engine has an engine body and an intake path, and wherein the intake path comprises an intake manifold connected to an outlet side of the supercharger, and wherein the intake path is situated on an upper rear side of the engine body and the supercharge is situated in front of the engine body relative to the direction of travel.

43. (New) The snowmobile of claim 36, wherein the engine has a crankcase which is substantially parallel to the width dimension of the body frame.

44. (New) A snowmobile comprising:
a body frame having a width dimension which is essentially perpendicular to a direction of travel;
a ski-runner attached to the body frame;
a crawler connected to the body frame;
a four-cycle engine which drives the crawler, the engine having a crankcase which is substantially parallel to the width dimension of the body frame, the engine being tilted forward in the direction of travel;
a supercharger connected to compress intake air for the engine; and
a drysump oil supplying system that supplies the engine with engine oil.

45. (New) The snowmobile of claim 44, further comprising an exhaust manifold for the engine, and wherein the exhaust manifold and the supercharger are situated on a front side of the engine relative to the direction of travel.

46. (New) The snowmobile of claim 44, further comprising:
a windshield formed on the body frame;
an intake manifold for the engine arranged close to the windshield.

47. (New) The snowmobile of claim 46, wherein the intake manifold is arranged vertically beneath the windshield.

48. (New) The snowmobile of claim 44, wherein the body frame comprises a front cover and a track housing, wherein a front suspension supports the ski-runner and is attached to the body frame at a front suspension attachment point, and wherein the drysump oil supplying system comprises:

an oil tank disposed inside an engine compartment that is enclosed by the front cover;

an oil pan arranged between the front suspension attachment point and the track housing.

49. (New) The snowmobile of claim 44, wherein the engine has a crankcase which is substantially parallel to the width dimension of the body frame.
